What is it

> **in simple terms**
>
> A tool to help aid in the detection of attacks

the tool uses a formula that takes the following looks at:

- How often a IP comes to a site
- What pages / info they are looking for
- where they come from
    - Location
    - network
- user agent

Where it came from

While on placement my website became slow, and google anatiycs showed my overall visitors going up but the time on the site was 00.
after hunting trough log files for hours and comparing times, I found 1 ip was responsible
